Export vehicles
overseas

About export vehicles from L & F

Since many decades now, Lindner & Fischer – or L&F in short – stands for highest quality “Made in Germany” in all global export overseas markets. This quality promise has now even been certified by TÜV.

Sophisticated constructions geared to their respective purpose of use coupled with highest efficiency – we do supply what our customers need.

In daily use our vehicles excel in all construction sites, mines and oil fields worldwide.

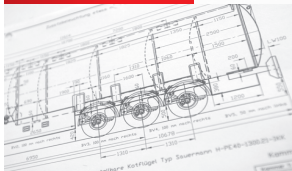

About export vehicles from L & F

We provide all our vehicles as trucks or semi-trailers with 2 or 3 axes.

L&F tank and truck types are equipped with our patented “L&F Low-Torsion body mounting system” guaranteeing unique flexibility and ruggedness even under the most difficult forms of use and protecting the body against torsion even in the most difficult use in terrain.

As a standard, our semitrailers come equipped with the extremely rugged Bogie W-aggregate that is easy to maintain. As an option we also offer leaf spring suspensions and air suspensions.

Highest corrosion protection through the galvanized supporting frame and through galvanized attachments, as a standard.

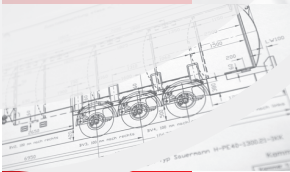

Overview export vehicles

Our product range includes:

- Fuel tanks
 - Water tanks
 - Bitumen tanks
 - Suction pressure-/vacuum tanks
 - Service & Maintenance vehicles
 - Miscellaneous superstructures
- CKD assemblies

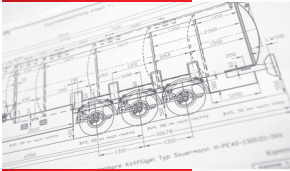

You do not find your desired vehicle in our brochure? No problem! We are known everywhere in the sector for our individual tailored constructions, special designs and customer-specific solutions! Simply contact us! We will help you out with products that fit to your needs.

Your success is our success!

Fuel tanks

We offer our fuel tanks as steel, stainless steel or aluminium version. Together with our patented tank supports, our tank assemblies are perfectly geared to any on-road or off-road use.

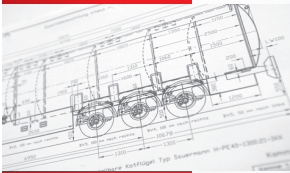

With a tank volume for truck bodies from 4,000 l to 30,000 l and of 20,000 l to 60,000 l for semi-trailers, our vehicles can be used to transport diesel, fuel, kerosene, crude oil or heavy oil depending on their design. As a matter of fact our tanks are manufactured in accordance with the ADR directives.

Fuel tanks

Due to our pumps providing a delivery volume of 1,000 l/min, to the different measurement systems and hose reels and thanks to the accessories adapted to each use, we are able to satisfy almost every customer request.

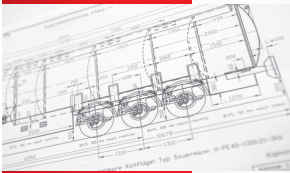

Water tanks

We offer our water tanks either in steel (with or without internal coating) or in stainless steel design. Generally it is differentiated between drinking water tanks and tanks for construction sites.

For both versions our patented tank supports guarantee highest flexibility on site and for any on-road and off-road use.

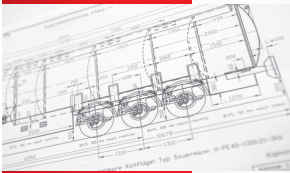

Water tanks

With a tank volume from 4,000 l to 30,000 l for truck bodies and from 20,000 l to 60,000 l for semi-trailers, we can satisfy almost any request.

We offer pumps with an output of up to 3,000 l/min, different spray bars and spray nozzles as well as additional useful accessories and provide thus a very large range of uses, perfect quality, longevity and perfect use.

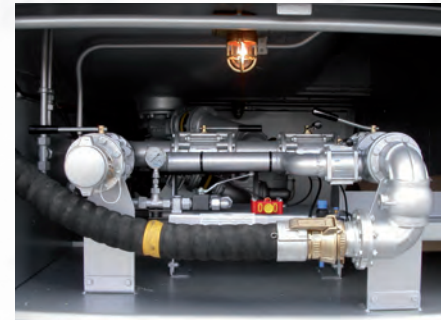

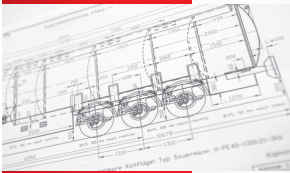

Bitumen tanks

We offer bitumen tanks exclusively to transport bitumen as truck bodies ranging from 4,000 l to 20,000 l as well as trailer skips for up to 45,000 l. Both options are available in steel or stainless steel.

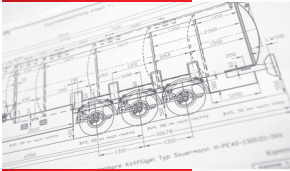

Also for our bitumen vehicles we use our proven L&F-components such as our patented tank support, the axis-aggregates for all-terrain use and our highly efficient design.

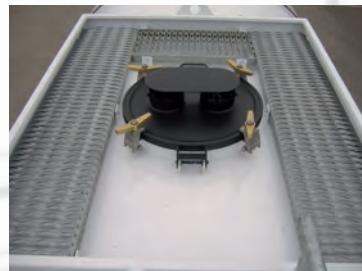

Bitumen tanks

Select from the most varied heating systems and laggings up to 100 mm, which allow for a transport of bitumen up to 250°C.

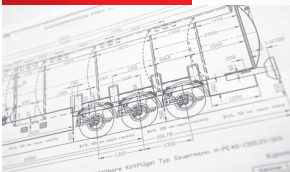

Suction pressure-/vacuum tanks

Suction pressure tanks are used to remove contaminated and oily water, excrements, mud and similar. We offer our suction pressure/vacuum tanks in steel either as fully galvanized version or painted in stainless steel. With tank bodies of up to 4,000 l to 20,000 l and tank cradles from 25,000 l to 40,000 l, we offer vehicles that are geared to our customers' needs.

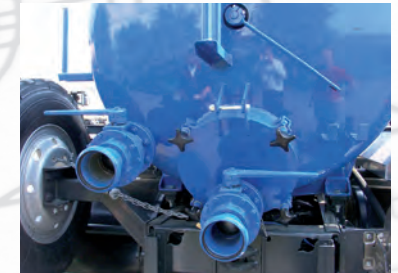

Moreover we offer our proven L&F-components such as our patented tank support, the axis-aggregates for all-terrain use and our highly efficient design.

With our air and water cooled vacuum pumps of a capacity of 420 m³/h – 2,000 m³/h, we can cover almost every need in waste management, in the building and oil industry.

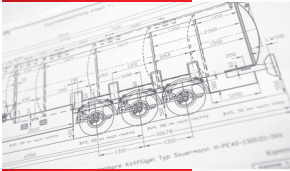

As an option we also offer useful accessories such as a cleaning cover which is opened hydraulically in the back, a hydraulic tilting mechanism for the complete structure as well as different cleaning pumps.

Service & Maintenance vehicles

For the most demanding use of mobile service and maintenance vehicles, we offer the following products:

- ✓ Mobile workshops in body or platform design
- ✓ Grease vehicles with integrated tanks or open casks
- ✓ Mobile workshops combined with integrated tanks
- ✓ Fuel or water tanks with integrated auxiliary tanks

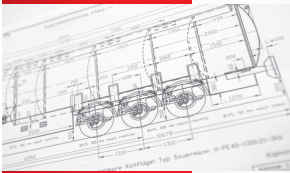

Service & Maintenance vehicles

Thanks to our expertise throughout the field of tank building, we are able to combine highly complex grease and fuel tanks.

Coupled with our experience from many decades in export we guarantee to our customers a highly efficient and flexible vehicle that is exactly geared to their demands and that functions smoothly even in the most difficult situations or to sum things up – quality “Made in Germany”.

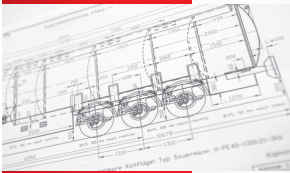

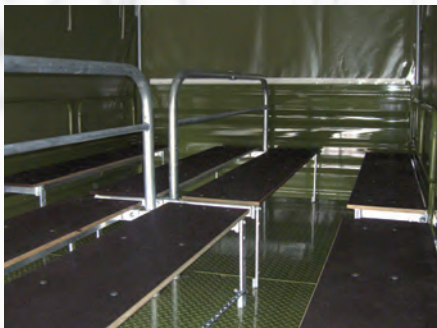

Miscellaneous superstructures

With our decades of experience in the overseas export business, we have now also developed in addition to the tankers and service vehicles, platform, flatbed body and box superstructures.

Exactly in the same manner as with our high terraincompatible tank superstructures, our flatbed body and box superstructures are equipped with the “L&F lowtorsion body mounting system”. This guarantees maximum flexibility and robustness even under the most difficult conditions of use.

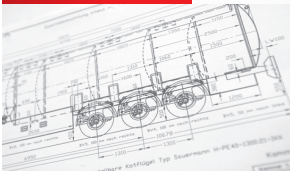

We offer our platform and flatbed body superstructures with and without a crane. In addition, we offer additional equipments customised to suit the purpose, which allow us to fulfil almost any customers' wishes.

CKD assemblies

We at Lindner & Fischer already realised at an early stage that it might be an advantage under certain circumstances to not only offer our products completely constructed and assembled as CBU units, but also to deliver them to the destination country as CKD kits and benefit from the **advantages of local added value** there.

This is why we have been offering our internationally operating partners for some time now the option of acquiring our products as CKD kits and of completing and assembling the delivered vehicles locally with our technical support at the point of destination.

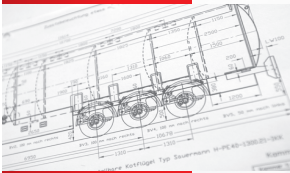

A competent partner on site with a well equipped workshop is required for this purpose. If this is the case, there is no longer anything that can stand in the way of delivery of our products as CKD kits.

The agreed kits are supplied in maritime containers. Our kits are subsequently completed with locally available material on the on site manufacturing partner's premises.

The advantages are obvious:

- ✓ **lower freight costs** as a result of shipment of larger numbers of items in cost-effective 20 or 40-foot containers;
- ✓ in most cases **lower import duties** in comparison to CBU units;
- ✓ in most cases **lower labour costs**;

High-tech paired with craftsmanship

No matter for which of our products you will opt, you will get the quality "Made in Germany" certified by TÜV for specific quality criteria. "Made in Germany" is not only our claim that we wish to master – quality "Made in Germany" is our promise to you!

We at Firma Lindner & Fischer are perfectly prepared for your orders. As a family-run, medium-sized company with flat hierarchical structures we are always close to the customer and in cooperation with our customers develop the best solutions to problems and perfect vehicle concepts. Whether you only need an individual vehicle or important quantities – our flexible, semi-automatic production, our trained experts and lean production processes ensure that almost everything can be realized.

In the branch we are renowned for vehicles that are not only highly efficient and effective in use, that offer best quality, longevity, ruggedness and a multitude of functions but that also are easy to maintain, that are direct and come in perfect ergonomic design. However – even if worst comes to worst our fast customer and spare parts services, our authorized repair shops and service partners are always able to assist you promptly and directly.

Your success is our success!

Lindner & Fischer ...

... with us you can drive correctly!

You do not find your desired vehicle in our product brochure? No problem! Simply contact us! We will jointly develop the ideal solution that perfectly fits your needs and requirements. Simply challenge us! We are sure that we can satisfy your demands!
