

LINDNER & FISCHER
Fahrzeugbau GmbH

**A PASSION FOR
BUILDING VEHICLE**

SINCE 1988

A SUCCESS **STORY**

Our family business was founded in Langenau in 1988 by Alfred Lindner and Josef Fischer, with seven employees. 35 years later, two of those seven employees are still working with us. This great sense of teamwork is possibly the finest achievement in our many decades of history.

There have been many changes over the past decades: with around 120 employees, several extensions of the plant in Langenau to currently 41,000 m², as well as two further locations in Werneuchen/Seefeld near Berlin and in Bad Fallingb.-stel in Lower Saxony, we have not only expanded in terms of size and workforce. We have also gradually increased our product and service portfolio to establish a future-proof business model through deliberate diversification and provide our employees and business partners security.

GLOBAL PARTNERS FOR COMMERCIAL VEHICLE SUPERSTRUCTURES

Anyone who wants to transport a variety of liquids as well as hazardous or bulk goods from A to B in tankers and silo vehicles, or needs to provide a wide range of other logistic services, will sooner or later come across Lindner & Fischer: with a global presence in more than 70 countries, the commercial vehicle superstructures and transport solutions that we design, produce and install are out on the road in a wide variety of sectors. As a global partner to the largest commercial vehicle manufacturers, we have gradually expanded our core competencies from production for tankers and silo vehicles to include the ideal combination of body and chassis and, in particular, off-road superstructure technology. We enjoy an excellent reputation on various markets as an export leader with our broad product portfolio.

QUALITY DOWN TO THE LAST DETAIL

Whether in customised or serial production, in the energy trade, construction and transport, conventional and opencast mining, waste disposal, relief organisation or in the defence sector – to name but a few sectors – our customers have come to appreciate our innovative solutions and reliable Lindner & Fischer “Made in Germany” quality.

OUR **VERSATILE PRODUCT PORTFOLIO** AT A GLANCE

For use around the globe

- ▶ Fuel tanks
- ▶ Water tanks
- ▶ Suction-pressure tanks and flushing vehicles
- ▶ Bitumen sprayers
- ▶ Service & maintenance vehicles
- ▶ Flatbed superstructures with and without a crane
- ▶ Silo vehicles
- ▶ Semi-trailers and low-loaders
- ▶ Customized solutions
- ▶ etc.

For transporting liquids

- ▶ Tank superstructures and trailers
- ▶ Customized solutions
- ▶ Measurement and lubrication systems

For wood pellets and free-flowing goods

- ▶ Silo vehicles

Scanning this QR code will take you directly to the product overview on our website.

WE **FULFIL** (PRACTICALLY) EVERY **CUSTOMER REQUIREMENT**

As one of the world's leading manufacturers of tankers and silo vehicles, we can cater for practically every requirement and task that we are called upon to fulfil. Our core competences lie in production of body-systems and in the flexible connection between superstructure and chassis. This also allows us to devise reliable, first-rate solutions for challenging geographical conditions and climatic zones that place the utmost demands on materials and quality.

Our international customers in particular value the fact that we can offer an almost unique portfolio of diverse and above all tailored solutions from a single source in a wide range of applications.

A WIDELY RAMIFIED NETWORK OF PARTNERS AND PROJECT COMPETENCE

Even with highly specific requirements from customers, we always find a way to fulfil our customers' needs at the highest level owing to our widely ramified partner network. When the widest variety of vehicles and superstructures are required and customers are seeking a single contact for project management, our project expertise makes us the first choice.

CERTIFIED **QUALITY** FOR **DEMANDING** APPLICATIONS

Our success is based on high-quality materials, standardised modules and individually manufactured components, which we process by hand to create customised solutions. Together with continuously monitored processes and workflows, this results in outstanding quality, from which our customers have been benefiting for decades to cope with their most demanding applications.

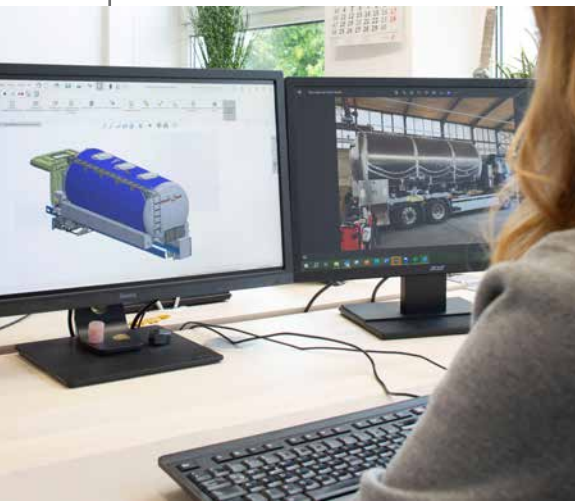

A SELECTION OF OUR CERTIFICATIONS AT A GLANCE

- ▶ Certified quality management according to EN ISO 9001:2015
- ▶ Certified environmental management according to EN ISO 14001
- ▶ Certified Body Builder of MAN Truck & Bus SE
- ▶ General contractor partner for Mercedes-Benz Trucks
- ▶ Approval by Volkswagen Group after passing SAQ 5.0
- ▶ HP-O certification for the construction of hazardous goods tanks and pressure vessels
- ▶ Welding approval according to EN ISO 3834-2
- ▶ Certified welders according to DIN ISO 9606-2 and DIN ISO 9606-1
- ▶ Approval according to the Pressure Equipment Directive 2014/68EU
- ▶ Approval according to ADR/RID 2023 para. 6.8.2.1.23

OUR SELF-CONCEPTION AS A GLOBAL PLAYER COMPANY

As a long-term and dependable business partner for our domestic and global player customers, we work sustainably and with integrity. We abide by applicable laws and guidelines, act ethically, respect human rights and outlaw child labour. We also ensure that our partner companies and suppliers adhere to these guidelines. We are aware of and have also pledged ourselves to our social responsibility through our Code of Conduct and our ethical and conduct guidelines. Regular compliance audits by our major national and international business partners confirm the effectiveness of our compliance management system.

PRODUCT DEVELOPMENT **IN HAND** WITH CUSTOMERS

Good cooperation is the recipe for optimum results. And good cooperation is based on a team spirit that engages not only our own employees, but also our customers as partners.

As a family-owned medium-sized company, our horizontal hierarchies, short communication channels and direct dialogue ensure close customer proximity. We see ourselves as our customers' partners and jointly develop optimised vehicle designs and solutions.

This results in products "based on practice, in keeping with practice and serving practice" that meet customers' needs and which drivers find enjoyable and safe to use.

APPLICATION-SPECIFIC **CUSTOM SOLUTIONS**

With our approach of partnership-based development, the area of customised solutions has particularly high priority. We produce custom designs, particularly for hazardous goods such as fuels, combustibles and lubricants or waste oils, but also for urea solutions such as AdBlue® and other transported goods and requirements. These also include interchangeable systems for the equipment needed for the widest variety of transport tasks. As a matter of course, all projects are implemented in compliance with the applicable statutory and application-specific standards and guidelines.

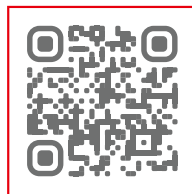

LOGISTICS VEHICLES FOR DISCERNING CUSTOMERS AND CHALLENGING WORK

Highly functional and 100% reliable vehicle solutions are required especially for operations in delicate and dangerous situations. Based on our more than 35 years of experience in vehicle construction for use in all climatic zones and geographical conditions around the world, our "L&F Low-Torsion Body Mounting System" for off-road applications, our technical expertise and our high quality standards, we can produce a customised configuration for even the most customer-specific application. Utmost flexibility under the most punishing operating conditions as well as robustness, first-rate driving safety and user-friendliness: long-standing, intensive customer relationships based on trust are proof that we fulfil the demands we place on ourselves and our products.

Not only do we fulfil technical and quality requirements, we also reliably handle project planning for transport, customs clearance, import and commissioning in the destination country. We naturally rely on our global network of partner companies for this purpose, most of whom also provide on-site service.

AN INTEGRATED INTERNATIONAL **SERVICE PROGRAMME**

Whether a customised, one-off solution or bigger quantities of vehicles: integrated first-rate service is always part of our commitment to quality.

With our three own locations in Germany, we are no further than 350 kilometres away from our customers. Furthermore, in critical cases, our customer service will be on site instantly. A comprehensive network of service partners is also available to our customers all over the country. Our service partners in the respective country take care of our international customers. In a service situation, we are therefore as close at hand as possible within a short period, can carry out repairs promptly, supply spare parts and support you with the necessary resources to get your vehicle back on the road. This also applies of course to servicing or other routine inspections.

WE GO THAT EXTRA MILE FOR YOU – EVEN FOR OLDER VEHICLES

Service with us does not end once the typical service life of our vehicles is over. Our comprehensive archive, which dates back to 1988, enables us to identify spare parts and provide technical documentation even years or decades after delivery. This means that commercial vehicles from Lindner & Fischer can still be properly repaired and maintained, many years after production.

THE LINDNER & FISCHER **TEAM SPIRIT**

Many of our employees have spent their entire working life with us or have returned to the company. Based on an appreciation of each individual employee's personality, we deploy personnel in the team as far as possible according to their talents and abilities. Over the decades, this has allowed us to create a constant sense of belonging that we are also a little proud of. It is important for us to listen to one another and create scope for personal development. We are open to criticism and set great store on a climate of cooperation across all organisational planes and hierarchical levels. We keep our doors open and cultivate a positive error culture in order to learn from mistakes and improve.

Our team spirit is also based on a corporate culture that succeeds in integrating people from all over Europe and the rest of the world and giving them a sense of being an important part of Team Lindner & Fischer, even beyond language barriers.

OPTIMAL WORKING CONDITIONS

An excellent working environment also of course includes creating optimal working conditions. The basis for this is fair wages. Equally self-evident for us are individual training and further education programmes for the personal development of each individual employee. We also offer benefits that larger companies cannot offer. Curious? Then we recommend you take a look at our website.

INSPIRATION FOR OUR TEAM SPIRIT

Our innovative spirit thrives on new impetus and bright ideas. We welcome suggestions from colleagues both old and new, and we offer budding talents and trainees in three professions excellent prospects of starting their career with us - and usually continuing it with permanent employment:

- ▷ Metal worker / Commercial vehicle engineering
- ▷ Vehicle mechatronics engineer / Bodywork technology
- ▷ Bodywork and vehicle construction mechanic / Vehicle construction technology
- ▷ Office management assistants
